**OMEGA**  
MOULDING COMPANY

# Grainbow

*Omega presents Grainbow, a collection of colorful veneer mouldings hand made in Italy. Featuring 11 items in a spectrum of wood stained square profiles, the collection inspires designers to inject color into framing compositions while maintaining the richness and character of wood by exposing open grain patterns.*

*The variety in hues paired with the transparency of stain is a primary selling point of this collection. Rather than a painted finish, it allows for integrating and introducing colors in both the artwork and a customer's interior design with a softer approach. The look is completed in a furniture finish satin varnish, giving the surface a soft luster which enhances the variegation of the grain and color tones.*

*Whether framing modern genres such as decorative prints and photography, to more traditional pieces such as watercolors, etchings, and treasured heirlooms, the collection's attributes play well with a balance of subtlety and richness. Additionally, the 5/8" square profile provides framers with a great solution to use its scale for combining and stacking with other mouldings, or to use in creating colorful table frames.*

## ◁ Making It Grain

The collection's colors and grain patterns get their pop due to the soft satin luster atop the finish. Details in the craftsmanship of hand made items are what makes good products great and what customers find attractive in Italian made products.
